

Failure analysis Corrosion consulting services

Deepwater Corrosion Services Inc. and Deepwater EU Ltd. cover all the bases when it comes to offshore corrosion engineering and inspection. Our ability to team senior corrosion specialists with field engineers and inspectors puts our group in a unique position to offer qualified solutions to unscheduled offshore corrosion failures. There is no aspect of corrosion outside of our scope.

Our network of Houston-based specialized test laboratories and expert consultants combine to bring fast, effective analyses and solutions. Deepwater can solve your corrosion problems. We have been moving the industry forward in the Gulf of Mexico, the North Sea, West Africa and the Far East since 1986.

- Proven record of success
- NACE-certified corrosion specialists
- Competitive rates
- Broad capabilities in all corrosion disciplines
- Unparalleled offshore experience base

Other available corrosion services:

Deepwater has a N.A.C.E.-certified team that designs and engineers all types of cathodic protection systems. Many of these designs have evolved from standard Deepwater products that can be cost-effectively tailored for any type of infrastructure asset.

Our staff has extensive experience in auditing assets, providing corrosion control and cathodic protection solutions for any given situation. In addition to concept and FEED and detailed design and modeling, we also provide third-party review services, failure analysis and anode testing.

Example 1
Heat exchanger failure

Choke erosion failure

Example 3
Ballast tank coating failure
